How To Use CSS3 for Menu Transitions and Animations

It seems like everyone is experimenting with CSS3 these days, getting ready for the big day when all browsers work harmoniously together for seamless [web design](#). In this tutorial we will show you how to use CSS3 to create transitions and animations for menus.

Making HTML5 WebSockets Work

WebSockets is the most technically challenging HTML5 feature to implement, but for truly interactive websites, it's a technology well worth learning. In today's article I'm going to point out some of the most notable caveats that may hamper you in your quest to master WebSockets.

How to Create a Visual Library of Images in HTML5 Canvas

In this tutorial we will produce an HTML5 and JavaScript application that will let us display a Magic the Gathering cards collection. Users will be able to scroll and zoom using the mouse.

Recent Articles

Flashmaps' DynamicLocator: Interactive Maps for Small Areas

Use Flashmaps' DynamicLocator to implement interactive, relatively small area maps. When a user selects an entry in a list, the map will focus on that corresponding object. Users can hover over an area to identify it and click on it for additional information. Try a free evaluation copy.

Flashmaps' AreaSelector: Interactive Maps for Wide Areas

Flashmaps' AreaSelector product delivers wide area maps. With AreaSelector, you can color-code map areas and display markers on top of the areas. In addition to zooming and panning, users can click to display information as well as select and deselect areas. Register to try a free evaluation copy.

The DB Mapper: Interactive Street-level Maps of U.S. and Canada

The DB Mapper product from Flashmaps offers interactive street-level maps for the U.S. and Canada. You can display markers on top of the maps to indicate hotels, restaurants, properties and more. Register to try a free evaluation copy.

The Dangers of HTML5: WebSockets and Stable Standards

New HTML5 technologies like WebSockets offer some amazing new opportunities for Web developers. But they also show how implementing unstable standards may cause more harm to a site than the benefits of the technology. What is the role of browsers and how should developers plan for when developing with HTML5?

Internet Explorer 6: What Have We Learned?

IE6 shipped more than 10 years ago, but its non-standard implementation of the shifting standards of 2001 still haunts today's developers. As the Web shifts to HTML5, and new versions of IE, Firefox and Chrome debut, have we learned the lessons of IE6?

Crank Up the Volume with HTML5 Music

With HTML5, music is making a comeback on the Web. Create amazing music site experiences where adding an audio file is as simple as inserting an image and users have more pause and play music outside a browser. The introduction of the <audio> tag eliminates the need for external music players, allowing for true integration of sound in your website.

Dojo.behavior: Write Modularized HTML Document Event Handling

The dojo.behavior module provides a simple and lightweight mechanism for listening to HTML document events. Find out what makes dojo.behavior one of the best event handling mechanisms around.

The Dojo Publish/Subscribe Event Mechanism

Learn how to use the Dojo Toolkit's versatile ContentPane widget to load dynamic content into your Web pages.

Post a Message on a Facebook Wall with JavaScript

Allowing your visitors to easily post links to your website on Facebook can really boost traffic.

Loading Dynamic HTML Content Using the Dijit ContentPane

Load dynamic content into your Web pages using the Dojo Toolkit's versatile ContentPane widget.

Handling Exceptions with ASP.NET

Exceptions can make Web applications useless from a user's perspective, but understanding how to prevent and handle exceptions can make the de-bugging process easier.

Optimize Your Web Page with CSS Sprites

CSS sprites mash up all the images used on a webpage into one large image and display only the part that contains the image wherever it's required. Using CSS sprites drastically reduces the load time of the page.

3 Fun Conditional Tricks for Your WordPress Custom Fields

These three tricks for manipulating the keys and values of WordPress Custom Fields produce some very interesting results.

Event Listening Made Easy with Dojo.connect

The Dojo libraries offer programmers a single coherent event system. With dojo.connect, you can execute any number of functions in response to DOM and widget events.

Using with the jQuery Globalization Plugin in ASP.NET

The jQuery Globalization Plugin provides globalization support to ASP.NET applications that can use JavaScript.
